Faizan Tariq

(916) 559-0506 | faizant316@gmail.com | LinkedIn | GitHub

Education

California State University, Sacramento **Jun 2026**

B.S. in Computer Science — ***GPA: 3.6***

- **Relevant Coursework:** Object-Oriented Programming, Data Structures, Algorithms, Operating Systems, Computer Networks
- **Honors:** NASA NCAS Scholar, competitively selected national program to collaborate with NASA engineers

Technical Skills

Languages: Python, C++, Java, JavaScript, TypeScript, PHP, SQL, Bash, HTML/CSS, JSON
Cloud (AWS): CDK, Lambda, S3, CloudFront, IAM, CloudFormation, CloudWatch, AWS SDK v3, AWS CLI
Frameworks & Libraries: React.js, React Native, Expo, Expo Router, React Native Reanimated, TanStack Query, Next.js 14, Node.js, Express, Flask, Jest, i18n-js, sharp, TailwindCSS, Pandas, NumPy, OpenAI API, Mistral
Tools & Platforms: Linux, Git, GitHub, GitHub Actions (CI/CD), Docker, Vercel, GCP, Postman, Jira, Supabase (Auth, Row-Level Security, Storage, Edge Functions), pgTAP, Stripe, ESLint, Prettier, Claude Code
Databases: PostgreSQL, MySQL, Relational Database Design, SQL Transactions
Concepts: Serverless & Event-Driven Architecture, Infrastructure as Code, CDN Caching, RESTful APIs, Data Validation, OAuth2, Webhooks, Role-Based Access Control, LLM Integration, Unit & Integration Testing, CI/CD, Cross-Platform Mobile (iOS/Android), Internationalization (i18n), Design Systems, Accessibility, Code Reviews, Agile

Experience

California Department of Social Services (CDSS) Dec 2024 – May 2026

Student Assistant *Sacramento, CA*

- Automated grant compliance tracking for **50+ agreements** using standardized data validation workflows, achieving **100%** fiscal accuracy across all reporting cycles.
- Analyzed and verified **$500K+** in budget/invoice data, reducing discrepancies by **20%** and reporting time by **30%**.
- Engineered standardized reporting templates adopted department-wide, improving operational efficiency across all grant programs.

NASA NCAS (National Community College Aerospace Scholars) Jul 2023 – Feb 2024

Aerospace Software Intern *Remote + NASA Facility*

- Built Python/NumPy/Pandas pipelines to ingest and transform LiDAR point-cloud data, reducing navigation error by **40%** and improving rover task efficiency by **25%**.
- Designed **3D reconstruction** algorithms for terrain mapping under direct mentorship of NASA engineers.

Projects

Wedded App (Co-Founder) | ***React Native, Expo, TypeScript, Supabase, PostgreSQL, AWS*** Sep 2026 – Present

- Co-architecting a bilingual (English/Punjabi) iOS/Android/web app on React Native, Expo Router and Supabase PostgreSQL (**35 migrations**, **86 RLS policies**); shipped **14 PRs**, **21K+ lines** across **226 files**.
- Built a serverless photo pipeline on **AWS** with CDK (TypeScript): S3 uploads trigger an ARM64 Lambda (**0.8 s**/photo) that strips EXIF/GPS and writes **3 WebP sizes** and a blurhash, served privately via CloudFront.
- Migrated **563 vendor photos** to AWS with idempotent Node.js scripts (AWS SDK v3) so image delivery can leave Supabase's **5 GB/month** free egress; a CI job type-checks, tests and synthesizes the stack.
- Engineered passwordless auth across **4 providers** (Apple with SHA-256 nonce replay protection, Google OAuth 2.0, SMS/email OTP via Supabase Auth); cut onboarding **50%** (6 to 3 steps) with database-driven plans.
- Built a **108-token** light/dark design system and UI-thread spring animations in Reanimated worklets with Reduce Motion fallbacks; the app ships **1,008 UI strings** at **100%** English/Punjabi parity.
- Automated GitHub Actions CI/CD: **4 parallel jobs** (∼**2.6 min** avg) gate every PR on ESLint, tsc, **240+ unit tests**, **346 pgTAP assertions**, a web build and CDK synth, then auto-merge; **98%** test coverage on core planning logic.

Makeup by Roko | ***Next.js 14, React.js, PostgreSQL, Supabase, Stripe, Vercel*** Apr 2026 – Jul 2026

- Deployed a production booking platform for a makeup artist: **49 REST API endpoints** on a Next.js 14 serverless backend, **11 PostgreSQL tables** with Row-Level Security, and real-time per-day calendar capacity.
- Integrated **6 third-party APIs** including Stripe webhook payments, Resend email automation, Zoom OAuth2 meeting creation, Google Maps Places autocomplete, and Google Analytics 4.
- Built a role-based admin dashboard with revenue reporting, booking management, review moderation, and a **token-based secure file upload system** using single-use time-limited links.

JM Comfort Service Platform | ***React.js, Node.js, REST APIs, PostgreSQL, Jira*** Jan 2026 – May 2026

- Full-stack HVAC platform with Node.js RESTful APIs handling **100+ requests/day** and PostgreSQL schemas supporting **1,000+ service records**, improving responsiveness by **30%**.
- Implemented SQL transaction logic with rollback controls to eliminate concurrent write conflicts across all active service workflows.

Tonelate – AI Writing Assistant | ***Python, Flask, React.js, OpenAI, Mistral*** Jul 2025 – Nov 2025

- Built a full-stack AI writing assistant with dual LLM integration across OpenAI and Mistral APIs, reducing response latency by **35%** through request pipeline optimization.
- Designed a React.js frontend with real-time inline rewrite suggestions, delivered as a production-ready prototype.
